SQL PROJECT • DATA ANALYTICS

Pizza Sales Analysis

Exploring orders, product demand and revenue using MySQL and four related datasets.

Tools: MySQL Workbench | SQL Joins | Aggregations | Window Functions

Prepared by: Md Zaseem
• GitHub: https://github.com/mdzaseem/Pizzahut-Sales-Analysis

Order volume & overall sales

TOTAL ORDERS

21,350

Count of unique order records in orders table.

TOTAL REVENUE

$817,860.05

SUM(quantity × pizza price), rounded to 2 decimals.

What this tells us

The dataset contains 21,350 orders and about $817.9K in pizza sales revenue.

SQL evidence

```sql
-- Retrieve the total number of orders placed.
use pizzahut;
select count(order_id) as total_orders from orders;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

total_orders
21350

```sql
-- Calculate the total revenue generated from pizza sales.alter.

SELECT
    ROUND(SUM(order_details.quantity * pizzas.price),
            2) AS total_sales
FROM
    order_details
        JOIN
    pizzas ON pizzas.pizza_id = order_details.pizza_id
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

total_sales
817860.05

Product pricing, size & best sellers

Q3. Highest-priced pizza

The Greek Pizza (XXL) has the highest listed price: $35.95.

Evidence: ORDER BY price DESC LIMIT 1.

```sql
-- Identify the highest-priced pizza.

SELECT
    pizza_types.name, pizzas.price
FROM
    pizza_types
        JOIN
    pizzas ON pizza_types.pizza_type_id = pizzas.pizza_type_id
ORDER BY pizzas.price DESC
LIMIT 1;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Conter

name	price
The Greek Pizza	35.95

Q4. Most common size ordered

Large (L) leads with 18,526 order-detail records; quantity sold for L is 18,956

```sql
-- Identify the most common pizza size ordered.

SELECT
    pizzas.size,
    COUNT(order_details.order_details_id) AS order_count
FROM
    pizzas
        JOIN
    order_details ON pizzas.pizza_id = order_details.pizza_id
GROUP BY pizzas.size
ORDER BY order_count DESC;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

size	order_count
L	18526
M	15385
S	14137
XL	544
XXL	28

Q5. Top 5 pizza types by quantity

Classic Deluxe (2,453), Barbecue Chicken (2,432), Hawaiian (2,422), Pepperoni (2,418), Thai Chicken (2,371).

Ranked by SUM(order_details.quantity).

```sql
-- List the top 5 most ordered pizza types
-- along with their quantities.

SELECT
    pizza_types.name, SUM(order_details.quantity) AS quantity
FROM
    pizza_types
        JOIN
    pizzas ON pizza_types.pizza_type_id = pizzas.pizza_type_id
        JOIN
    order_details ON order_details.pizza_id = pizzas.pizza_id
GROUP BY pizza_types.name
ORDER BY quantity DESC
LIMIT 5;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

name	quantity
The Classic Deluxe Pizza	2453
The Barbecue Chicken Pizza	2432
The Hawaiian Pizza	2422
The Pepperoni Pizza	2418
The Thai Chicken Pizza	2371

Category performance & daily demand

Q6. Quantity ordered by category

Classic: 14,888 • Supreme: 11,987 • Veggie: 11,649 • Chicken: 11,050.

Classic is the largest category by units sold.

```sql
-- Join the necessary tables to find the
-- total quantity of each pizza category odered.

SELECT
    pizza_types.category,
    SUM(order_details.quantity) AS quantity
FROM
    pizza_types
        JOIN
    pizzas ON pizza_types.pizza_type_id = pizzas.pizza_type_id
        JOIN
    order_details ON order_details.pizza_id = pizzas.pizza_id
GROUP BY pizza_types.category
ORDER BY quantity DESC;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

category	quantity
Classic	14888
Supreme	11987
Veggie	11649
Chicken	11050

Q9. Average pizzas ordered per day

The SQL result is 138 pizzas per day (rounded to a whole number).

Daily quantity is grouped by order date before averaging.

```sql
-- Group the orders by date and calculate the average
-- number of pizzas ordered per day.

SELECT
    ROUND(AVG(quantity), 0) AS avg_pizza_ordered_per_day
FROM
    (SELECT
        orders.order_date, SUM(order_details.quantity) AS quantity
    FROM
        orders
    JOIN order_details ON orders.order_id = order_details.order_id
    GROUP BY orders.order_date) AS order_quantity;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

avg_pizza_ordered_per_day
138

Q8. Pizza-type distribution by category

Pizza types available: Supreme 9, Veggie 9, Classic 8, Chicken 6.

This is product variety from pizza_types.csv, not order volume.

```sql
-- Join relevent tables to find the
-- category-wise distribution of pizzas.

select category , count(name) from pizza_types
group by category;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

category	count(name)
Chicken	6
Classic	8
Supreme	9
Veggie	9

Why it matters

Category demand can guide stock planning; product variety helps explain how broad each category is.

When customers order & revenue leaders

Q7. Order distribution by hour

Peak hour in the visible results: 12:00 PM (2,520 orders), followed by 1:00 PM (2,455).

Order counts are grouped by HOUR(12PM).

```sql
-- Determine the distribution of orders by hour of the day.

SELECT
    HOUR(order_time) AS hour, COUNT(order_id) AS order_count
FROM
    orders
GROUP BY HOUR(order_time)
ORDER BY hour;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

hour	order_count
9	1
10	8
11	1231
12	2520
13	2455
14	1472
15	1468
16	1920
17	2336
18	2399
19	2009
20	1642
21	1198
22	663
23	28

Q10. Top 3 pizza types by revenue

Thai Chicken ($43,434.25), Barbecue Chicken ($42,768.00), California Chicken ($41,409.50).

Revenue = quantity × listed pizza price.

```sql
-- Determine the top 3 most ordered pizza types based on revenue.

USE pizzahut;

SELECT
    pizza_types.name,
    SUM(order_details.quantity * pizzas.price) AS revenue
FROM pizza_types
JOIN pizzas
    ON pizzas.pizza_type_id = pizza_types.pizza_type_id
JOIN order_details
    ON order_details.pizza_id = pizzas.pizza_id
GROUP BY pizza_types.name
ORDER BY revenue DESC
LIMIT 3;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content: | Fetch rows:

name	revenue
The Thai Chicken Pizza	43434.25
The Barbecue Chicken Pizza	42768
The California Chicken Pizza	41409.5

Business takeaway

Lunch is the strongest visible order period, while chicken-based pizza types lead the revenue ranking.

Revenue share & cumulative growth

Q11. Revenue contribution by category

Classic: 26.91% • Supreme: 25.46% • Chicken: 23.96% • Veggie: 23.68%.

Note: this query calculates category-level share, not each individual pizza type.

```sql
-- pizza type to total revenue

SELECT
    pizza_types.category,
    ROUND(SUM(order_details.quantity * pizzas.price) / (SELECT
                    ROUND(SUM(order_details.quantity * pizzas.price),
                                2) AS total_sales
                FROM
                    order_details
                        JOIN
                    pizzas ON pizzas.pizza_id = order_details.pizza_id) * 100,
            2) AS revenue
FROM
    pizza_types
        JOIN
    pizzas ON pizza_types.pizza_type_id = pizzas.pizza_type_id
        JOIN
    order_details ON order_details.pizza_id = pizzas.pizza_id
GROUP BY pizza_types.category
ORDER BY revenue DESC;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

category	revenue
Classic	26.91
Supreme	25.46
Chicken	23.96
Veggie	23.68

Q12. Cumulative revenue over time

Cumulative revenue starts at $2,713.85 on 2015-01-01 and reaches $817,860.05 by the end of the dataset.

SUM(revenue) OVER (ORDER BY order_date).

```sql
-- Analyze the cumulative revenue generated over time.

SELECT
    order_date,
    SUM(revenue) OVER (ORDER BY order_date) AS cum_revenue
FROM (
    SELECT
        orders.order_date,
        SUM(order_details.quantity * pizzas.price) AS revenue
    FROM order_details
    JOIN pizzas
        ON order_details.pizza_id = pizzas.pizza_id
    JOIN orders
        ON orders.order_id = order_details.order_id
    GROUP BY orders.order_date
) AS sales;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

order_date	cum_revenue
2015-01-01	2713.850000000004
2015-01-02	5445.75
2015-01-03	8108.15
2015-01-04	9863.6
2015-01-05	11929.55
2015-01-06	14358.5
2015-01-07	16560.7
2015-01-08	19399.05
2015-01-09	21526.4
2015-01-10	23990.350000000002
2015-01-11	25862.65
2015-01-12	27781.7

How to read this

Revenue share shows which categories contribute most; cumulative revenue shows how sales build over time.

Top pizzas within each category

Q13. Top 3 pizza types by revenue in each category

Category	Rank 1 pizza	Revenue	Rank 2 pizza	Revenue	Rank 3 pizza	Revenue
Chicken	Thai Chicken	$43,434.25	Barbecue Chicken	$42,768.00	California Chicken	$41,409.50
Classic	Classic Deluxe	$38,180.50	Hawaiian	$32,273.25	Pepperoni	$30,161.75
Supreme	Spicy Italian	$34,831.25	Italian Supreme	$33,476.75	Sicilian	$30,940.50
Veggie	Four Cheese	$32,265.70	Mexicana	$26,780.75	Five Cheese	$26,066.50

Key findings

Classic leads in total quantity, Large is the most common size, lunch is the busiest visible period, and Thai Chicken is the top revenue-generating pizza type.

SQL skills demonstrated: joins • GROUP BY • aggregate functions • subqueries • window functions (RANK, SUM OVER).
